

Euro-Par 2006

Dresden, Germany

29th August - 1st September 2006

Industrial Exhibition in conjunction with Euro-Par 2006

The MEGWARE Computer GmbH is a accredited service provider for high-performance computing with a specialisation in Compute-Cluster (Linux/Windows) in Europe. The Saxon enterprise delivers cluster-solutions based on customers requests throughout Europe. No matter whether the clusters are equipped with 8 or several 1,000 CPUs, they stand out with excellent capacity.

MEGWARE developed its own cluster components, for instance the rack systems SlashTwo and SlashFive, the intelligent power-switch ClustSafe and the ClustWare-Appliance with DirectRackControl for cluster management. The close partnership to Intel, AMD, Tyan and further well-known companies facilitates an early integration of innovative sunrise technology in MEGWARE solutions.

Outstanding projects of the recent months include cluster systems for automotive, aircraft and aerospace industry, e.g. SKODA (czech republic), Volkswagen AG, German Aerospace Center.

Another important references are Linux cluster for the Leibniz-Rechenzentrum Munich (Germany) and clusters for the University of Zaragoza (Spain).
